EXPERIENCE

Freelance Engineer

LLM-based Draft Automation System | [GitHub](#)

2025 – present

- Built a system for a real-world government workflow to convert Telugu input into structured documents (XML → DOCX)
- Fine-tuned Qwen 2.5 (7B) using LoRA to handle strict formatting and reduce hallucinations in structured outputs, giving an average error rate of 0.03 per batch
- Designed a multi-step pipeline (classification → form → generation) to match drafting processes
- Worked under constraints like reliability, and data sensitivity

Freelance Engineer

Shivira Travels | [Website](#)

2025 – present

- Built a website that helped a travel business move their operations online
- Set up domain, hosting, and business email to make the company fully operational online
- Made sure the system is usable and reliable for daily operations
- Ongoing maintenance and updates

AI Intern

Slash Mark | [Certification](#)

Jan 2024 – Apr 2024

- Worked on ML/NLP tasks including classification and text analysis
- Explored CNNs and basic NLP techniques on different datasets

Data Science Intern

Solar Secure Solutions | [Certification](#)

Oct 2023 – Dec 2023

- Worked on data analysis and modeling tasks using Python
- Built a predictive model for cost-related analysis

PROJECTS

Dynamodelx | *Dynamic ML Modeling Framework* | [GitHub](#)

- Built a PyTorch-based framework to dynamically construct and train models for regression and classification tasks with minimal configuration
- Designed a unified interface (UFA) for regression, classification, and uncertainty modeling
- Implemented Bayesian Neural Networks to capture prediction uncertainty instead of just point estimates
- Reduced model setup time by automating architecture building, training, and evaluation in 4 to 5 API calls

Baseline OS | *Minimal Linux Environment for ML Workflows* | [Google Drive](#)

- Built a minimal Arch-based system from baseline profile with only what's needed for ML workflows
- Removed unnecessary services and packages to create a controlled, lightweight runtime environment.
- Used as a base system for lightweight Docker workflows
- Currently working on making the setup reproducible and reducing system size further

SKILLS

Languages: Python

ML/DL: PyTorch, CNNs, scikit-learn

LLM/NLP: Transformers, Fine-tuning

Libraries: Pandas, NumPy

Tools: Git, Docker, Linux

Web: React, Flask, Streamlit

EDUCATION

Sri Venkateswara College Of Engineering

B.Tech in Artificial Intelligence and Machine Learning

Tirupati, Andhra Pradesh

Feb. 2021 – May 2025

WRITING & ACTIVITIES

- **Medium:** <https://mohith-g.medium.com>
- Write about ML and statistics, focusing on how models work
- Led final year project building a VGG19-based waste classification system and packaging it as usable software
